Stronger Together: Empowering Lives After Hodgkin Lymphoma and Other Blood Cancers

October 16-17, 2026
Hyatt Regency Cincinnati • Cincinnati, Ohio

Join Hodgkin's International and the University of Cincinnati Cancer Center for an immersive educational and supportive experience for survivors of Hodgkin's lymphoma and other blood cancers. Created for survivors by survivors, this gathering brings together long-term survivors from across the globe to connect, share their journeys, and draw strength from the power of shared experience.

Our symposium is uniquely dedicated to the complexities of long-term survivorship, offering an exceptional space for learning, community, and empowerment.

Open to survivors, caregivers, healthcare professionals, researchers, and advocates, the event features leading experts who will address the lasting effects of cancer treatments and share strategies to improve lives.

We look forward to coming together in Cincinnati, Ohio for this two-day experience that will inform, inspire and celebrate the diverse community of survivors, care partners, clinicians, trainees, and support professionals who walk this journey every day and prove that we are, indeed, **better together**.

About Hodgkin's International

Our goal is to connect survivors with one another and to provide them with essential information about the Late Effects they may face as a result of earlier treatments. We also seek to promote education and medical research in the area of survivorship, foster a better understanding of the particular needs of long term survivors, and to advocate for the interests of Hodgkin Lymphoma survivors around the world.

About Survivorship at the University of Cincinnati Cancer Center

The University of Cincinnati Cancer Center's Adult Survivorship and Supportive Services Program is the region's largest comprehensive program dedicated to supporting people throughout their cancer journey—from diagnosis through long-term survivorship.

It offers personalized survivorship care plans, the region's first and only oncology primary care clinic, and a broad range of supportive services to help manage long-term effects such as fatigue, cognitive changes, emotional health, and lifestyle wellbeing.

With a multidisciplinary team and community-focused approach, the program provides wellness classes, integrative therapies, screenings, and resources designed to improve quality of life and empower survivors as they live beyond treatment.

Additionally, Cincinnati Children's Cancer Survivorship Center provides lifelong, specialized follow-up care for individuals who have survived pediatric cancer, including adults and those not originally treated at Cincinnati Children's. The program focuses on wellness and long-term health, recognizing that late effects of childhood cancer treatment can emerge years later and may impact physical, cognitive, and psychosocial well-being.

As one of the first survivorship programs in the United States, Cincinnati Children's offers comprehensive, individualized care plans, ongoing monitoring, access to experts familiar with survivorship risks, and opportunities to participate in research that advances long-term outcomes. The center emphasizes coordinated support tailored to each survivor's history and health goals, helping patients maintain optimal quality of life well beyond treatment.

Thank you

Hodgkin's International and the University of Cincinnati Cancer Center Survivorship and Supportive Services program appreciate your partnership and look forward to a wonderful event.

Keynote Speaker,
Ethan Zohn knows what it means to be a *survivor*.

Winning CBS Survivor: Africa's \$1 million prize launched an extraordinary life of entrepreneurship, advocacy, and purpose—one defined by resilience and enduring spirit.

After publicly sharing his battles with CD20+ Hodgkin's Lymphoma and two stem cell transplants, Ethan became a global ambassador for leading cancer and survivorship organizations. As an international keynote speaker, he inspires audiences with humor, honesty, and vulnerability—encouraging them to never let a crisis go to waste, but to use it as an opportunity for meaningful impact.

Featured Speakers

Our speaker lineup features nationally recognized clinicians, researchers, and survivorship thought leaders who bring deep expertise and compassionate insight to every aspect of long-term survivorship.
